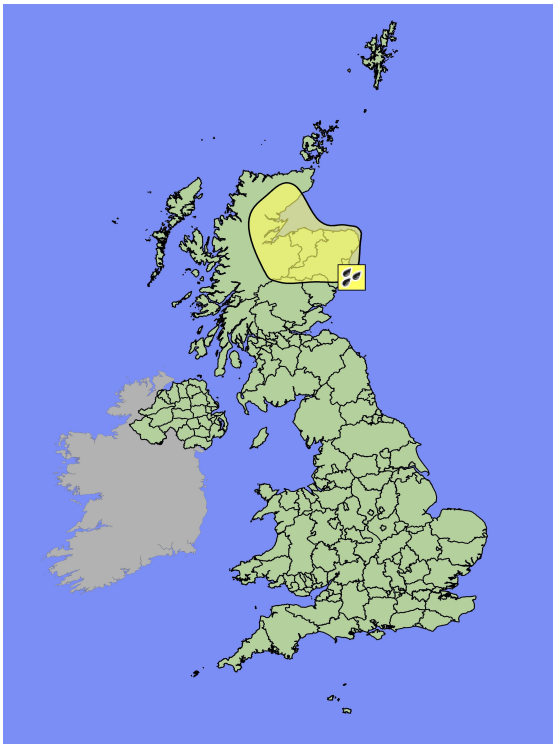
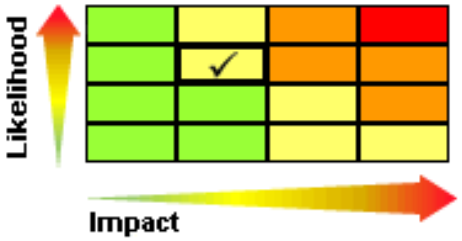
National Severe Weather Warning Service





Chief Forecasters Assessment
The frontal system over northeastern parts of Scotland will gradually weaken and pull away into the North Sea. Further heavy rain is expected early in the day, but gradually the rain should ease and become confined to northern Scotland. Further falls of snow are likely in the mountains, with some accumulations above 500 metres and some snowfall affecting the very highest roads.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Fri, 27th Apr 2012** until **15:00 on Fri, 27th Apr 2012**

Outbreaks of rain and hill snow will gradually become confined to Northern Scotland on Friday, with a further 10-20 mm of rainfall possible, dying out through the day. The public should be aware of standing water and spray and the risk of localised flooding, and perhaps some wet snow on the highest roads.
